

Vulnerability Intelligence

Prioritise and patch vulnerabilities in real-time

Unpatched vulnerabilities are associated with nearly 60% of breaches, with the mean time to exploitation reduced to only 44 days. While the patching challenge may seem insurmountable to defenders and vulnerability management teams, less than 1% of disclosed vulnerabilities are classified as “highest risk” where severity status and active exploitation demand the fastest possible remediation. So, prioritisation is key.

The Silobreaker Intelligence Platform

The Silobreaker intelligence platform provides real-time vulnerability intelligence based on severity and active exploitation, empowering security teams to efficiently prioritise and patch critical risks.

Identify your most critical and exploited vulnerabilities

Understand which vulnerabilities are being actively exploited in the wild, which have proof-of-concept exploits and which ones pose the highest risk to your organisation, based on threat actor interest, scoring and industry. Comprehensive coverage ensures you get the full picture.

Use intelligence to prioritise patching

Combine timely and comprehensive vulnerability data with the activities and discussions of threat actors, security researchers and other experts. Access everything you need in one place, and seamlessly pivot from finished intelligence to raw chatter.

Stay ahead of new threats

Monitor for high-risk vulnerabilities and alert on scoring and exploitation changes to proactively address potential threats. With faster alerting and broader coverage than NVD, you can significantly reduce the window of opportunity for attackers.

Capabilities

- Expansive coverage of open, deep, dark, structured and finished intelligence sources
- Centralised visibility into actors, malware and emerging threats
- High-speed vulnerability notifications and alerting
- CVSS3, EPSS and CTI trend scoring for CVEs
- Ransomware and industry dashboards
- Finished intelligence and daily briefs on vulnerability exploitation

Discover the difference Silobreaker can make

Higher quality insights delivered at unprecedented speed

Collect and aggregate the most comprehensive dataset, including open, deep, dark, structured, and finished intelligence sources for full coverage. Deliver higher quality, timely intelligence on high-risk vulnerabilities relevant to your organisation, based on real-time data.

Improved operational efficiency

Streamline the intelligence cycle by automating data collection, intelligence production and delivery into one single platform. Gain centralised visibility into actors, malware and emerging threats, so teams can collaborate to monitor, notify and alert on active exploits early.

Reduced risk to your organisation

Monitor key assets based on your priority intelligence requirements (PIRs), gain visibility into new and active vulnerabilities and enable teams to prioritise patching quickly and confidently. This helps reduce the risk of cyberattacks, improves your security posture and strengthens operational resilience.

It has been really impactful to add Silobreaker to our threat intelligence toolkit. Its capacity to compile vast amounts of data and carry out insightful analysis enhances our day-to-day cybersecurity activities. Because of its user-friendly interface and real-time updates, which improve the entire experience, the platform has been a game changer in our arsenal."

About Silobreaker

Silobreaker is a leading security and threat intelligence technology company, that provides powerful insights on emerging risks and opportunities in near-real time. It automates the collection, aggregation and analysis of data from open and dark web sources in a single platform, allowing intelligence teams to produce and disseminate high-quality, actionable reports in line with priority intelligence requirements (PIRs). This enables global enterprises to make intelligence-led decisions to safeguard their business from cyber, physical, and geopolitical threats, mitigate risks and maximise business value.
