

Bridging the gap between data and intelligence

Modern cyberattacks have evolved into stealthy, unpredictable and persistent adversaries, creating challenges for organisations worldwide. Security teams need to be able to gain visibility into the threat landscape and make informed decisions quickly and accurately to mitigate risk, ahead of impact.

The Silobreaker Intelligence Platform

Silobreaker is a software platform for intelligence production. It provides teams with the tools they need to produce higher quality intelligence more efficiently, enabling stakeholders to make better, intelligence-led business decisions.

One platform, covering the full intelligence cycle

Our platform streamlines the full intelligence cycle; from managing intelligence requirements and collecting and processing the right data, to production and dissemination, all in a single place. It empowers intelligence teams to produce timely, relevant deliverables based on real-time data, at speed, so decision-makers have more time to address emerging risks.

Built to make sense of external unstructured data

Silobreaker is designed to process and analyse text-heavy data from open and dark web sources at scale. It supports use-cases such as asset monitoring, third-party risk assessment, ransomware tracking and vulnerability prioritisation by surfacing context and evidence. It also enables users to understand the impact that geopolitical and physical security events have on the broader cybersecurity landscape.

Workflow tools to ensure efficiency, speed and quality of intel delivery

Our suite of workflow tools automates many time-consuming tasks, allowing analysts to dedicate more time to high value strategic work. Our integrated custom-branded report builder streamlines the production and dissemination of reports, saving time and ensuring they are timely and highly relevant to each stakeholder's requirements.

Key benefits

- Reduce the risk of cyberattacks
- Understand the impact of geopolitical and physical risks
- Monitor supply chain and third-party risks
- Protect your assets and brand from risk
- Prioritise and patch vulnerabilities in real-time
- Collaborate across workflows, metrics and reporting

“

“There was a major incident last week and the first we knew of it – despite all manner of other confidential feeds – was through Silobreaker”

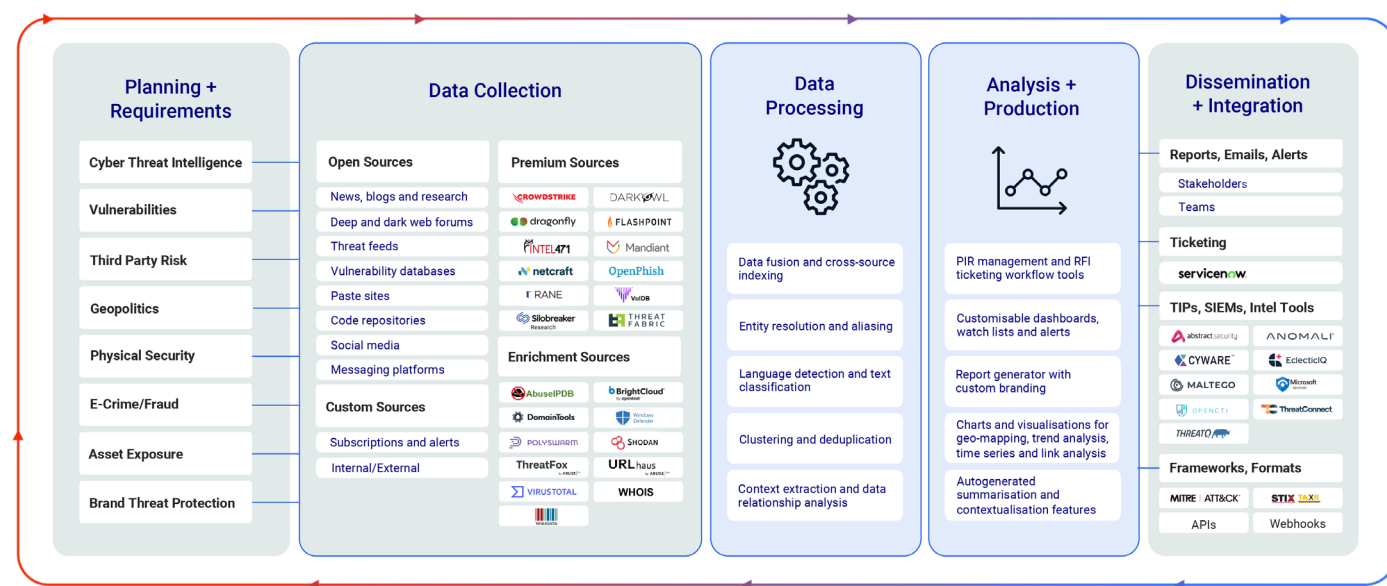

Head of OSINT, Naval Force

“Silobreaker enables us to reduce reporting time from 2 hours to just 20 minutes for new zero-day incidents”

Threat Intelligence Lead, Consulting Firm

Bring your full intelligence production into a single integrated platform

By unifying the intelligence cycle, security teams can work more efficiently while enhancing the quality and speed of their output.

Pure SaaS deployment

Silobreaker is a modern SaaS platform built for scalability, accessibility and security. This means reduced set-up time and cost and simplified ongoing management for security teams across the enterprise.

Data Integrations

Silobreaker supports a broad range of integrations, allowing you to consume and make sense of all your open, dark web and premium data sources in a single platform and support existing workflows by seamlessly integrating with your security stack.

Silobreaker AI

Silobreaker AI is integrated into the Silobreaker intelligence platform to summarise and extract key insights, quickly and accurately, acting as a trusted threat intelligence assistant to busy analyst teams.

Onboarding with a dedicated customer success team

Our experienced team will quickly get you up and running to achieve your short- and long-term business goals, allowing you to stay ahead of risks and maximise the value of Silobreaker from the outset.

About Silobreaker

Silobreaker is a leading security and threat intelligence technology company, that provides powerful insights on emerging risks and opportunities in near-real time. It automates the collection, aggregation and analysis of data from open and dark web sources in a single platform, allowing intelligence teams to produce and disseminate high-quality, actionable reports in line with priority intelligence requirements (PIRs). This enables global enterprises to make intelligence-led decisions to safeguard their business from cyber, physical, and geopolitical threats, mitigate risks and maximise business value.
